Re: Completion of the Kearl Expansion Project Deep Undergrounds FRP Scope of Work

Jesse and Serge,

Your firm, Surge Oilfield Solutions Ltd. (SOS) was subcontracted by Kiewit Construction Canada Co., on behalf of our K2 Mining joint venture, to perform fiberglass reinforced pipe (FRP) bonding and installation services, as part of the Kearl Expansion Project Deep Undergrounds 2 scope of work. As your work is now complete, we would like to take this opportunity to heartily commend you and your employees for your impressive performance on our project.

SOS provided a crew of six highly-skilled and qualified employees to perform bonding and installation services for both 10" and 12" process water lines. The work performed by your crew was completed in accordance with all Project Specifications, ahead of schedule. Your personnel adhered diligently to the Project safety standards and demonstrated a positive safety culture throughout their time on site. I am pleased to note that no members of the SOS team were hurt during performance of the work.

Following completion of your work, our hydrostatic test conducted on the two above-referenced lines passed without incident.

Gentlemen, you and your team members exceeded our expectations on all fronts. Your FRP bonding knowledge combined with skillful management of your field operations was invaluable to us.

We highly recommend SOS for any and all FRP bonding jobs and would not hesitate to engage your services for future FRP installation work, should the opportunity arise.

Sincerely,

Gregor P. Burton, B.A., B.Ed., PDP.Cert.
Project Engineering Manager
Kearl Expansion Project Deep Undergrounds
