To Whom It May Concern:

Re: Surge Oilfield Solutions Ltd (SOS)

Wil Mechanical sub-contracted SOS for the completion of FRP on-site at Kearn Lake in the MSF buildings which included pipe ranging from 2 inch to 10 inch. They also aided in the fabrication of spools at our shop in Edmonton

SOS came highly recommended to Wil Mechanical from Piping Specialties, and as a team surpassed our expectations. The crew were professional, highly organized, skilled and worked to complete the job on-time and safely. Upon completion of our project SOS's work proved to be of the highest quality with no repairs needed on system as there were zero failed bonds when hydro testing.

Wil Mechanical Would contract SOS for FRP related work in the future. SOS possesses reliable crews and management team experienced with FRP. SOS continuously stays current on their FRP training and offers innovative solutions for FRP repair work if required.

Wil Mechanical recommends SOS for quality and cost effective FRP fabrication and installation.

Sincerely,

Clint Doty
